

Staging Block Coverage Table

Use this table to work out how many blocks you need. The left hand and bottom columns (in yellow) provide the stage dimensions in metres. So if, for instance, you need to fill an area 3m x 4.5m you would look up 3m on the left hand side and 4.5m at the bottom. Where the row and column intersect (in the green area) is the number of blocks you require, in this case 24 blocks.
