

ACTIVE STAGE & LIGHTING

Safety Testing & Inspection

DANGER
Electric shock
risk

from
£395

All overhead equipment, including lighting rigs and curtain tracks should be periodically inspected to ensure that the installation is safe and remains fit for purpose.

Most insurance companies will also insist on a periodic mechanical and electrical safety inspection in order to maintain cover.

As professional experienced installers, we are pleased to offer:

- :: Periodic mechanical safety inspections of lighting bars, curtain tracks and rigging
- :: Periodic electrical safety inspections of lighting bars, winches and high level equipment
- :: PAT testing of stage lights, dimmer packs, control desks, etc

To learn more about our test & inspection services, please visit

Is it time to upgrade to LED stage lighting?

It may be more cost-effective than you think.

LED stage lighting is:

- :: Brighter & cool running
- :: Reliable, no more blown lamps
- :: Low power consumption, climate-friendly & lower bills
- :: Multi-colour, no need for gels and filters
- :: Safe, no heat, so no burns or fire risk
- :: Maintenance-free, over 50,000 hours lifetime
- :: Guaranteed, 3 year warranty*

* Applies to all Brightzone professional theatre lighting fixtures

We specialise in upgrading old-fashioned tungsten-halogen lighting installations to work with the latest LED stage lights. Since much of the infrastructure is already in place, this is generally far more cost-effective than a completely new installation. You won't normally need to replace your old lights one-for-one. LED stage lights are far brighter and far more versatile, so one new high power LED can take the place of 3 or more conventional tungsten-halogen lanterns. Please enquire for your free site survey and demonstration.
